

## Freestyle Wave Ltd V2

"Compact and Furious"

Program: Freestyle Wave Pro

For 2010 we developed a new freestyle wave collection that we feel will introduce new standards for the market in Freestyle Wave boards design. We decreased the Freestyle Wave boards range to seven volumes; we kept 75 and 120 the same shape as last year, and we developed and introduced 5 brand new shapes allowing you to cover the same wind range of last years but with less models. These are 85, 91, 96, 101, 111 with respective widths of 57.5, 59, 60, 62 and 65 cms

### The Freestyle Wave LTD features:

We introduced a **new hull design** with a full V, and without any deep concaves, just minor concaves in the middle just to make sure the V is a really flat V when the board comes out of the mould. Our **new rocker line** is a little bit higher in the front and straighter in the middle point between the front foot and the back foot strap. This allows the boards to feel more exciting and throwabout just like wave boards and perform many more moves. The feeling as soon as you touch the board is like having a really small and compact wave board but at the same time an increased planing capacity compared to last year.

The Freestyle Wave's **outlines are completely new** with **narrower tails and noses** to give you a shorter and more compact feel to guarantee more top end performance, in speed, carving and jumping. We redesigned a proper volume distribution according to the latest development of shape design, and we reduced fin sizes quite significantly: 1 cm on all the sizes, except the small size. A shorter and more compact feel for 2010 to guarantee more top end performance. RRD freestyle wave, the best just got a lot better!

### Technology:

Custom made full Herex 100 sandwich top and bottom with Biaxial Glass for the deck and Glass for the bottom custom made lamination. Herex 100  $\Omega$  (omega) bottom stringers for 91 and smaller sizes.
